

This bar chart shows the **top 10 countries** with the **highest number of confirmed COVID-19 cases**. The United States leads by a significant margin, followed by Brazil and India. The data highlights how the virus spread disproportionately across different regions. The y-axis uses scientific notation (1e6) to accommodate large numbers in millions.

Key Observations:

- US has the highest confirmed cases, surpassing 4 million.
- Brazil and India follow, with rapidly rising case counts.
- Other countries like Russia, South Africa, and Mexico also show high infection rates.

This bar chart presents the **top 10 countries with the most reported deaths** due to COVID-19. The US again ranks highest, indicating a high mortality rate or larger population exposed. Brazil, the United Kingdom, and Mexico follow closely.

Key Observations:

- The US reports the highest number of COVID-19-related deaths, above 140,000.
- European countries like the UK, Italy, France, and Spain appear prominently.
- The chart reflects both healthcare infrastructure and response effectiveness.

This bar chart shows the top 10 countries with the highest number of **recovered COVID-19 cases**. **Brazil** leads by a significant margin, followed by the **United States** and **India**. The data highlights how recovery rates vary across different regions. The y-axis uses scientific notation (1e6) to accommodate large numbers in millions.

Key Observations:

- **Brazil** has the highest number of recovered cases, exceeding **1.8 million**.
- **The United States** and **India** follow, with recoveries above **1.3 million** and **900,000**, respectively.
- Other countries like **Russia**, **Chile**, and **Mexico** also show substantial recovery figures, ranging from **300,000 to 600,000**.
- Countries such as **South Africa**, **Peru**, **Iran**, and **Pakistan** complete the top 10 with recovery counts close to **250,000–300,000**.
